

Vessel (Formative period, 2000-200 BC).

Bowl with linear designs on its surface (Chavín style 800-200 BC).

Although there are few studies of wood technology in pre-Hispanic times, it is evident that artisans already knew about the textures, strengths and species of wood, especially from our coasts, which were used to make vessels and carved objects. For this work, instruments such as punches, perforators, knives and sawed tools probably made of stone were used.

Ear ornaments with designs of characters in profile holding sticks (Wari, 600-1000 AD).
