

Sewing kit, spindles, cotton balls (Chancay, 1000-1400 AD)

Needle for textile making.

Piruros, which functioned as stops on spinning spindles. They were found at the Castillo de Huarmey site (Wari, 600-1000 AD)

A weaver's doll fixed on a cushion with designs. Made with plant fiber, threads and textiles (Chancay, 1000-1400 AD)

The textile technological process begins with the cleaning of the raw material, which includes deginning the cotton and loading the sheared camelid fiber so that it can then be spun through the spindles to form skeins that can be dyed. For the use of the loom, warps were used, which are the fixed elements, and wefts, which are the mobile elements, which are woven and structure the garments.
